

KeyTracker

An easy - to - use key management system

Now user accountability for Keys

3 Easy Steps

1. Insert access peg into port next to key needed. Turning the access peg a quarter turn unlocks the key plug.

2. Remove the key plug with its attached keys from the board. Your access peg is locked into the board.

It cannot be removed until the key plug is re turned. Since the access peg is marked with an I.D. number, color, or letters, you know at a glance who has taken the keys!

3. Return the key plug to its port. A quarter turn to the left frees your access peg. The key plug is once again locked onto the board.
